

Manik Chaudhary

Lead QA | AI-Assisted Test Automation Expert

Email: manik1441@gmail.com | Phone: +91 9643505814 | Location: Hyderabad, TELANGANA, IN
LinkedIn: [linkedin.com/in/manik-chaudhary/](https://www.linkedin.com/in/manik-chaudhary/) | GitHub: github.com/manik1441 | Portfolio: manik1441.github.io/CV_2.0/

PROFESSIONAL SUMMARY

Passionate Lead QA specializing in building enterprise-grade test automation frameworks and pioneering AI-assisted testing solutions. Experienced in leveraging machine learning and artificial intelligence to power intelligent test case generation, self-healing selectors, and predictive analytics that drive autonomous continuous testing. Proven track record in strategic technical leadership, resource management, and the orchestration of global cross-functional teams to deliver high-velocity, premium-quality software. Expert in UI, API, database, performance, and cloud-native testing (AWS, Azure) with seamless integration into modern CI/CD pipelines.

CORE EXPERTISE & TECHNICAL SKILLS

Languages	Python, Java, SQL, Oracle PL/SQL
Test Frameworks	Hybrid, TDD, Robot Framework, Cucumber (BDD), Pytest, TestNG
AI, ML & Generative AI	GitHub Copilot, OpenAI API, LangChain / LangGraph, LLMs (GPT-4, Claude), Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Prompt Engineering & Prompt Tuning, Predictive Quality Analytics, Intelligent Test Case Generation, Autonomous & Serverless Execution, AI Model Training & Prompt Tuning, Agentic QA Workflows & Orchestration, Self-Healing Selector Engines
Testing & Quality Eng.	Selenium WebDriver, Playwright, Postman, Requests, Pandas, Tricentis Tosca, Jmeter, Mocking Utilities, Test Automation Framework Architecture (Hybrid, BDD, TDD, POM), Test Strategy, UI/API/DB Automation, Cloud & Data Testing, Load/Performance Testing, Usability Testing, Test Data Management, Defect Management, Quality Gates
Cloud, Data & DB	Databricks, Snowflake, Oracle RDBMS, AWS
CI/CD & DevOps	Jenkins, Azure DevOps, GitLab, Docker
Leadership & Practices	Resource/People Management, Project Planning & Delivery, Agile/Scrum, SAFe, Stakeholder Collaboration, Continuous Improvement, Team Mentoring, Coaching, Resource Allocation, Developing Others

CERTIFICATIONS

- [Claude Certified Architect Foundations](#) (Anthropic)
- [AI-900: Microsoft Azure AI Fundamentals](#) (Microsoft)
- [PCEP - Python Programmer](#) (Python Institute)
- [Professional Scrum Master I](#) (Scrum.org)
- [SAFe 5.0 Practitioner](#) (Scaled Agile)
- [Github Copilot GH-300](#) (Github)
- [AZ-900: Microsoft Azure Fundamentals](#) (Microsoft)
- [Tricentis Tosca - AS1](#) (Tricentis)
- [ISTQB CTFL](#) (ISTQB)

PROFESSIONAL EXPERIENCE

QA Architect / Resource Manager / Test Automation Lead

EPAM Systems

Aug 2021 - Present

- Architected and scaled enterprise-wide test automation frameworks utilizing Python, Pytest, BDD methodologies, and Selenium across cloud-native environments (AWS, Azure).
- **AI Enablement & People Management:** Managed and upskilled a cross-functional global QA team of 8 members in AI/ML tools, prompt engineering, and generative AI coding assistants like GitHub Copilot.
- Designed and implemented AI-assisted testing solutions, leveraging machine learning (ML) models for predictive defect analysis, autonomous test case generation, and self-healing execution scripts.
- Orchestrated cloud-native test architectures and serverless testing solutions on AWS and Azure, utilizing Databricks and Snowflake to validate complex, large-scale data migrations and automate big data workflows.
- Engineered modular, highly reusable UI, API, and database testing libraries, reducing custom automation maintenance efforts and accelerating regression cycles.
- Leveraged Tricentis Tosca to implement model-based test automation, establishing high-coverage regression suites for enterprise business workflows.
- Defined comprehensive quality engineering strategies and robust quality gates integrated seamlessly into Jenkins and Azure DevOps CI/CD pipelines.
- Managed resource allocation, end-to-end project planning, and delivery governance in Agile/SAFe environments to align QA outcomes with strategic business goals.

SDET II

S&P GLOBAL

Jun 2019 - Aug 2021

- Contributed to the design and development of automation frameworks for UI and API testing using Java, Python, with requests, Selenium and pytest.
- Integrated automation solutions with CI/CD pipelines and defect management tools such as JIRA and TFS, improving release efficiency and traceability.
- Delivered internal training sessions to upskill teams on automation best practices and foster knowledge sharing.
- Actively participated in tool evaluation and proof-of-concepts (PoCs) to support enterprisewide adoption of scalable QA solutions.
- Gained strong exposure to the financial domain, enhancing business understanding and test coverage for critical applications.

Software Engineer

Guardian India Operations

Mar 2018 - Jun 2019

- Designed and implemented automation solutions for regression testing using SahiPro, improving test efficiency and reducing manual effort.
- Assisted in test strategy creation and participated in functional specification reviews to ensure early defect prevention and alignment with business requirements.
- Conducted proof-of-concepts (PoCs) to evaluate and recommend new automation tools and frameworks for enterprise adoption, contributing to continuous improvement of QA practices.
- Collected and analyzed business requirements to design and implement effective solutions.
- Contributed to the development of back-end and front-end modules, ensuring functionality, performance, and scalability.
- Performed troubleshooting and bug fixing to maintain application stability and improve user experience.

QA Engineer

SoftTech India Pvt Ltd

Oct 2014 - Mar 2018

- Created and executed functional and regression test suites to validate application quality and stability.
- Developed early automation test scripts to reduce manual effort and accelerate testing cycles.
- Actively participated in Agile ceremonies (sprint planning, daily stand-ups, retrospectives) to ensure continuous quality delivery and alignment with development goals.

KEY PROJECTS

Professional Projects

Google – GGRC

Role: Lead Automation Engineer

Google GGRC is an open-source framework meticulously designed to streamline Governance, Risk, and Compliance management. By elegantly mapping complex regulations to specific internal controls, it provides organizations with a structured approach to oversight. While currently considered a legacy or archived project, its core architecture remains a sophisticated blueprint for automating audits, tracking risks, and maintaining a robust, transparent compliance posture.

Amazon PLOA

Role: Software Engineer

Amazon PLOA is a comprehensive digital ecosystem designed to streamline and automate Leave of Absence management for its global workforce. By centralizing complex workflows—such as eligibility tracking, benefits integration, and regulatory compliance—it ensures a seamless experience for employees needing extended time away. The platform elegantly bridges the gap between workforce stability and employee well-being, providing a robust framework for managing unpaid leave and health-related benefits at scale.

Personal Projects

Agentic AI-Powered Test Data Management (TDM) [Link]

Role: Lead Architect & Developer

An agentic, multi-agent Test Data Management (TDM) platform designed to dynamically provision complete, custom test data environments directly from natural language prompts. Built with Python and FastAPI, this system orchestrates specialized AI agents (Lead & Generator Agents) to dynamically compile database structures, spin up schema-compliant FastAPI endpoints, and inject synthetic datasets obeying complex relational constraints. Featuring real-time WebSocket pipeline tracking and an integrated SPA command center, it eliminates manual database provisioning and acts as an autonomous, on-demand data provider for automation suites.

AI-Assisted Test Automation Framework [Link]

Role: Lead Architect & Developer

A pioneering enterprise-level test automation framework integrated with AI models to achieve autonomous execution, dynamic test data generation, and self-healing script capabilities. Implemented using Python, it incorporates intelligent log analysis, predictive failure modeling, and an adaptive selector healing engine that automatically repairs broken element locators at runtime, substantially reducing test maintenance cycles and accelerating regression pipelines.

EDUCATION

Bachelor of Technology

Galgotias College of Engineering & Technology, UPTU | Gr. Noida, Uttar Pradesh

Graduated: 2013
